SUMMARY

Computer Engineering undergraduate who builds and ships complete systems, not prototypes — REST APIs in Flask/FastAPI, PostgreSQL-backed data models, Dockerized deployments, and applied NLP/ML pipelines. Comfortable working across the stack, with a track record of open-sourcing production-shaped projects and driving them from architecture through deployment.

EDUCATION

B.E. Computer Engineering, Agnel Institute of Technology and Design, Goa

Jul 2023 – Jun 2027 (Expected)

CGPA: 7.74 / 10 (Semesters 1–5)

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript, TypeScript

Backend: Flask, FastAPI, Node.js, REST APIs, JWT Authentication, SQLAlchemy

Frontend: React, React Native, Next.js, Expo, Tailwind CSS

Databases: PostgreSQL, Firebase, Supabase

AI / ML: scikit-learn, PyTorch, sentence-transformers, Retrieval-Augmented Generation (RAG), NLP, Anomaly Detection

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Gunicorn

EXPERIENCE

Artificial Intelligence Intern, Lenovo India

Jul 2025 – Aug 2025 | Remote

- Engineered NLP-based conversational chatbots in Botpress across an 8-week internship, designing multi-turn dialogue flows for domain-specific use cases
- Prototyped a contextual conversational-AI flow and iterated on prompt design through repeated testing cycles to improve response relevance and reduce dead-end conversations

Backend & Mobile App Intern, CareMeez

Oct 2025 – Jan 2026 | Remote

- Implemented backend database operations supporting video processing and structured data storage in production Firebase collections
- Debugged and optimized mobile app UI components, improving responsiveness and reducing reported performance issues

President, RoboClub — Agnel Institute of Technology and Design

Jul 2024 – Present | Goa, India

- Led the launch of RoboClub's official website, serving as the primary information and event-registration hub for 300+ students
- Organized technical workshops and inter-college competitions for 100+ participants, managing logistics, sponsor coordination, and volunteer teams

PROJECTS

BotifyNow — AI Chat & Retrieval-Augmented Generation Platform

Python, FastAPI, OpenAI API, Qdrant, React

- Architected a RAG pipeline combining OpenAI embeddings with Qdrant vector search to deliver context-aware answers over user-uploaded PDF/text documents
- Decoupled the backend into independent service modules (embedding, retrieval, generation, PDF extraction) behind a FastAPI REST layer
- Built a React + Vite chat interface with live typing indicators and automatic document summarization on upload

github.com/ByteLounge/BotifyNow-AI-Chat-RAG-APIs

Inventory Management System — Full-Stack SaaS Platform

React, TypeScript, Flask, PostgreSQL, Docker

- Designed a Flask REST API with SQLAlchemy ORM and Alembic migrations, backed by PostgreSQL 15, to manage inventory, sales, and stock-alert data
- Secured endpoints with JWT authentication and bcrypt password hashing; served via Gunicorn for production readiness
- Containerized frontend, backend, and database with Docker Compose for single-command orchestration and dev/prod parity

github.com/ByteLounge/Inventory-Management-System

Persona-Ranking — Offline NLP Document Intelligence Engine

Python, sentence-transformers, PyTorch, scikit-learn, Docker

- Built an NLP pipeline that ranks and extracts persona-relevant sections from batches of PDFs using sentence-transformer embeddings
- Packaged the full inference stack into a network-isolated Docker image (--network none), enabling secure, fully offline batch processing
- Automated matching of each job configuration to its referenced source PDFs, processing multiple jobs sequentially without manual intervention

github.com/ByteLounge/Persona-Ranking

Network Intrusion Detection System

Python, scikit-learn, pandas, tshark

- Built an end-to-end ML pipeline — packet capture → feature extraction → training → detection — using a Random Forest classifier on the NSL-KDD dataset
- Implemented a CLI and Tkinter GUI exposing capture, preprocessing, training, evaluation, and live-detection as independently runnable commands
- Automated evaluation reporting (classification reports, confusion matrices) and persistent alert logging for detected intrusions
